

NGUYEN PHI VU

Fresher Java Backend Developer

CAREER OBJECTIVE

Final-year Software Engineering student with hands-on experience building a full-stack e-commerce platform with Java 21, Spring Boot, Spring Cloud Gateway, MongoDB, and Docker. Seeking a Fresher Java Backend Developer position to strengthen backend engineering skills, contribute to reliable business systems, and grow through code review and collaboration with an experienced development team.

EDUCATION

Industrial University of Ho Chi Minh City
Bachelor of Software Engineering

September 2021 - Present

SKILLS

Java & Backend Development

- Programming Languages: Java 21, JavaScript, TypeScript.
- Frameworks: Spring Boot 4.1, Spring Cloud Gateway, Spring Data MongoDB.
- Architecture: Microservices, RESTful API, API Gateway, inter-service communication.
- Database: MongoDB Atlas; document-oriented data modeling.
- Authentication: Email verification, JWT-based admin access, role-based authorization.
- Payment Integration: VNPay, MoMo, Stripe, and Cash on Delivery.
- Frontend Knowledge: Next.js 16, React 19, TypeScript, Tailwind CSS 4.

DevOps & Infrastructure

- Containerization: Docker, Docker Compose.
- Deployment: Vercel and Render.
- Build Tools: Maven multi-module, npm.
- Version Control: Git, GitHub.
- API Integration: REST clients, callback and webhook handling.
- Testing: JUnit and Spring Boot Test.

Development Tools

- IDE: IntelliJ IDEA, Visual Studio Code.
- API Testing: Postman and browser network tools.
- Other: Maven, validation, SMTP email, Cloudinary, Git workflows.

PERSONAL PROJECTS

PulseTech E-Commerce Platform

Source: [Frontend](#) | [Admin](#) | [Backend](#)

Live Demo: pulse-tech-beryl.vercel.app

- Designed and developed a technology e-commerce system with a Next.js storefront, a separate admin dashboard, and Java Spring Boot microservices.
- Implemented four Maven modules: API Gateway, Product Service, Auth Service, and Order Service, with Spring Cloud Gateway as the single entry point.

- Built REST APIs for products, variants, content, authentication, addresses, wishlists, carts, coupons, orders, and payment workflows.
- Modeled color and storage variants with independent price offsets and stock; validated availability and decreased the correct variant stock during ordering.
- Integrated VNPay, MoMo, Stripe, and COD, including payment URL creation, return callbacks, signature verification, and order payment updates.
- Developed coupon rules for product and shipping discounts, customer assignment, usage limits, and one coupon per discount category.
- Built admin features for product and inventory management, order details and status transitions, vouchers, customer locking, and role assignment.
- Integrated Gemini AI with live product, variant-stock, pricing, and policy context to provide data-grounded customer support.
- Containerized the system with Docker multi-stage builds and Docker Compose; configured MongoDB Atlas and environment-based deployment for Vercel and Render.
